## Hemorrhoids:

- Naturally occur in the body in both men and women and can become bothersome over time.
- 50% of adults suffer or will suffer from hemorrhoids in their lifetime.
- The condition, if not properly treated, can worsen.

## Why Suffer?

## THD Procedure

- **THD** is a less traumatic and less invasive surgical treatment for hemorrhoids and has been shown to have less pain than other surgical procedures.
- The **THD** procedure does not involve surgical removal of the hemorrhoidal tissue which can be traumatic and painful. With **THD** only the blood vessel to the hemorrhoid is treated without excision of the tissue.
- The **THD** technique for the treatment of hemorrhoidal disease preserves the anal tissue which greatly reduces pain and allows for the normal postoperative anal function.
- **THD** can be performed easily in the outpatient setting.
- With **THD**, the patient can go home a few hours after the procedure and can resume normal activities within 24-48 hours.
- For more information, please contact your physician or visit us online at [www.thdamerica.com](http://www.thdamerica.com)
